

## CLEANING THE FOOT OFF A SQUARE BOWL

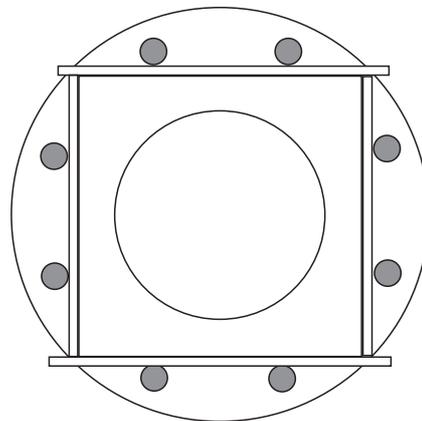

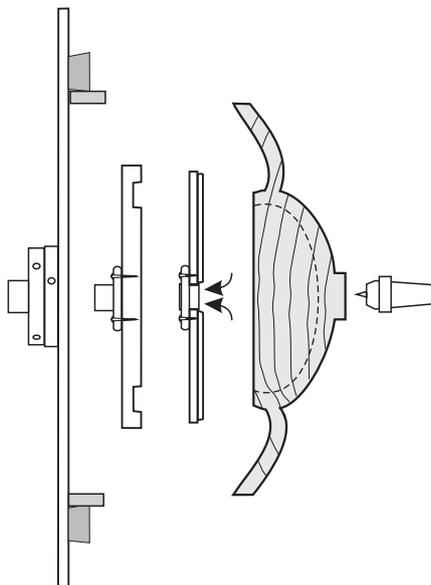

A square bowl of this shape may be held in Cole jaws (an external fit, possibly with shortened buttons), or a jam chuck, or a vacuum chuck, or pressed against a faceplate with the tailstock. It could have been designed with a taller bowl rim to ensure an easy fit in Cole jaws.

A square bowl with this slightly undercut rim may be held in Cole jaws (an internal fit), or a jam chuck, or a vacuum chuck, or pressed against a faceplate with the tailstock.

The curve in the wings of this square bowl allow it to be held easily in Cole jaws. Or it may be held in a jam chuck, or a vacuum chuck, or pressed against a faceplate with the tailstock.

A square bowl with upswept wings may be held in a jam chuck, or a vacuum chuck, or pressed against a faceplate with the tailstock. Or Cole jaws may be used with battens along each side of the bowl.
