

SALAD SERVERS

A bandsaw training exercise created by Bruce Irvine

This project is designed as a training exercise for bandsaw use. There is no lathe work planned. The salad servers are cut from the block and sanded to a desired finish. One of a pair may have the end hollowed to be a shallow spoon while the other may be cut to be a salad fork. The size of the wood to start the project may be varied from the 300 long x 65 wide x 35mm high block shown here.
