

BABY RATTLE

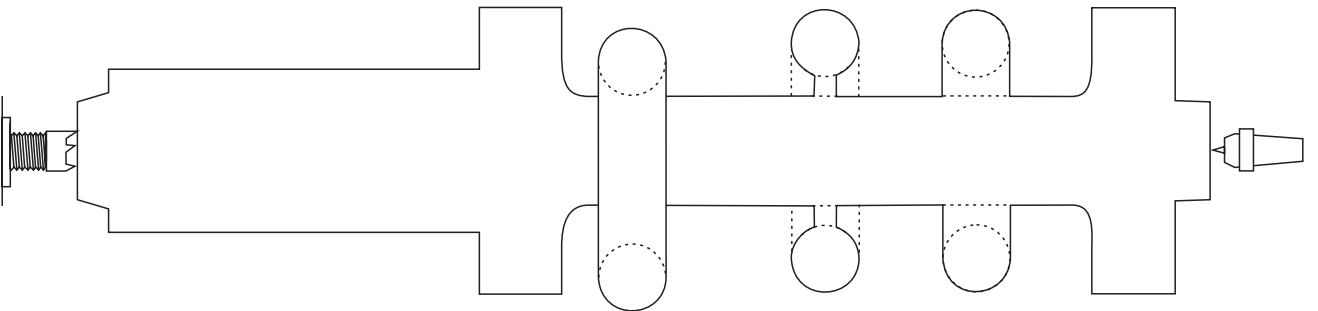

Start with a block 150mm long and 40mm square. Clean, non-splintering, non-toxic, wood is needed. Mount this between centres and round it off.

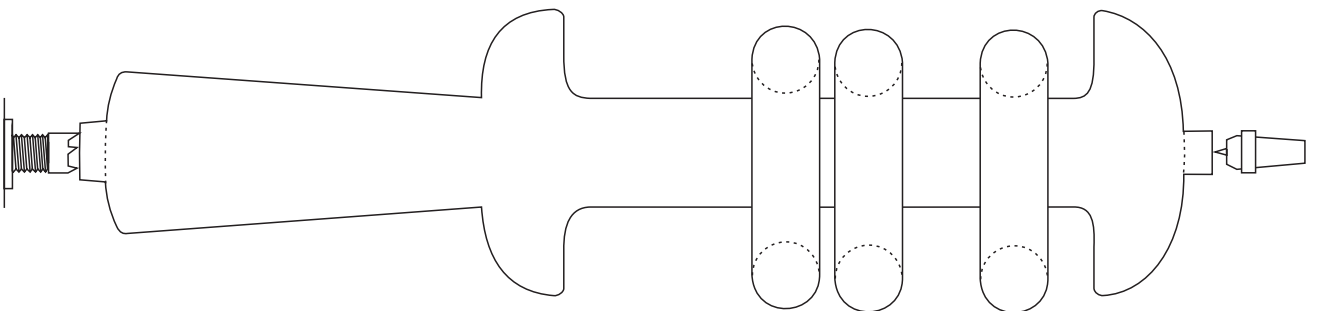

Mark the locations of the various features. Cut these down to the required diameters.

Make the three captive rings and complete the shaft in that area.

Shape the remaining areas of the rattle. Round off all corners and thin down the head and tail supports. Sand the entire surface. If a finish is used be sure that it is perfectly food-safe.

Part off one end then hand finish both ends.
