

A PLATE/PLATTER STAND

Cut two pieces to the outside shape shown. This can be made with the material of your choice - mdf, plywood, plastic sheet.

In one cut a slot from the bottom up as shown. In the other do not cut from the bottom up but from the top down as shown by the dashed line. The width of this slot should be the same as the thickness of the material used for the stand. Now use these slots to slide the two parts together.

The height and width of the stand will need to be adjusted to match the size of the item being displayed.
